National Benchmarks

Throughout this report, you'll see comparisons to a National Average, which is calculated from our national dataset of over 4000 responses. National benchmarks may not be available for new survey questions.

Domain Scores

Questions in the survey are grouped into topics called domains. Domain scores summarize staff feedback on these topics and are based on the average ratings of Likert items in that domain. When we report on individual questions, we usually share the percentage of respondents who agree or strongly agree. Because domain scores consider the full answer scale, they also capture the strength of agreement or disagreement with statements in that domain. We summarize the average ratings and then place the calculation on a 0–10 scale. For each domain, a score of 5 represents the national average for the domain. A score of 7 is one standard deviation above average; a score of 3 is one standard deviation below average.

Survey Notes

- \cdot *Survey items with an asterisk are not included in the domain score for that domain
- **Survey items with a double asterisk are reverse-coded because for these items lower agreement is a better result

Retention Options

The report only shows those responses that were selected by at least one survey respondent. Below are all the possible options shown on the survey for retention-related questions.
